

The Learning Together Workshop Series Presents...

The Sound Card System

increasing speech intelligibility through a multisensory approach

Presenter: Erin Bennett, M.S., CCC-SLP

What is the Sound Card System?

The Sound Card System (SCS) is a step-by-step method of introducing sounds to children through seeing, feeling, moving and hearing. Each sound has a picture, a name and a visual cue that assists a child in developing a clear motor-plan for sounds in words.

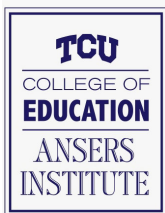

The SCS is a simple tool that can be used by parents, teachers and others in any setting; home, school, and community. Children are taught to use hand cues in a way that promotes independence. Changing the verbal cue, "say the word" to a visual cue helps a child correct a word(s) with success.

Don't Miss This Opportunity!

Participants will learn how to use the SCS to prompt children for clearer speech intelligibility. You will leave with a complete set of sound cards, knowledge of how to use the system and a clear plan of how to get started.
